Green
Product

ActivFlo LITE

Water Conditioner

Taking charge of your limescale Point of Use (POU) Protection

Product Description

A POU water conditioner is used to protect all appliances and water heaters from scaling issues.

Features

- 5 year warranty
- No power, no salt, no maintenance
- Protects water heaters from calcium build-up and premature failure
- For use with traditional water heaters and tankless water heaters
- Turbulent Amplifier to ensure maximum efficiency
- Installation is approved for Copper, PEX, CPVC and SCH40/80 PVC
- Installation is Bi-Directional flow
- POU protection

| Product Code | ZAFL2234 |
|---------------------------|----------|
| Body Connection | ¾" FNPT |
| Optimum Working Flow Rate | 4.2 GPM |
| Maximum Operational Flow | 12.4 GPM |
| Length | 8.1" |
| Warranty* | 5 years |

HOW DOES THE ACTIVFLO LITE WORK?

Water enters the Activflo Lite and is immediately directed by the revolutionary turbulent amplifier which sends the water into a spinning motion to help ensure maximum efficiency of the water being processed.

The water is then sent through a series of Zinc anodic channels, which when combined with Activflo's natural electrolytic process helps change the calcite mineral to the smooth, non-adhering Aragonite.

This Aragonite crystal has a smooth external surface which prevents it from adhering to domestic pipework, boilers and appliances. It remains in suspension until it is then passed down the drain.

If at any point these particles made their way onto a surface, they become much easier to remove without any need for cleaning agents or aggressive cleaning action.
